  Pass-out Year :2016
  Percentage : 91

About Me

Dedicated and highly motivated B. Tech Computer Science and Engineering graduate seeking a challenging role to apply technical skills and contribute to innovative projects in the field of software development.

ACADEMIC PROJECTS

Main Project : Online Voting System Using Biometrics

Duration   : 8 months

Project Description:
- This is a web-based application which is more accessible, secure and efficient than the existing system. The integration of biometrics authentication within the system will provide an efficient way to cast their votes from any location as a result of the smart voting module which can be accessed from any device with internet connectivity. This system is less time consuming, inexpensive and also a hassle-free way to conduct the election process, making online voting a better way to vote.

Mini Project : Campus Recruitment System

Duration : 3 months

Project Description:
- This is a web application which enables a clear communication between students, companies and placement cell. This system helps to automate the process of recruitment system and makes the recruitment process easier.

Achievements

- Completed an internship in python web development from Grapex Genix Technical Solution Pvt.Ltd
- Pursuing an internship in MEA(R)N Stack Web Development from Luminar Technolab
